

KEKKILÄ DSM 1 W 20P R7181

Kekkilä Professional supplies a wide range of high performance growing solutions worldwide securing good growing results for all types of plants in different growing conditions. The basis of Kekkilä Professional substrates is carefully selected, first-class Sphagnum peat harvested from our own peat bogs. Own peat raw material secures constant product quality throughout the season and from year to year.

Kekkilä DSM 1 W 20P R7181 is a mix of raw materials from Brown Sphagnum peat screened to fine grade. The product is limed and fertilised. Perlite is inert raw material and it improves air capacity, drainage, structural stability and re-wettability of the substrate. It is used for crops with sensitive roots and when faster drying of the trays or pots is needed.

APPLICATION

Kekkilä DSM 1 W 20P R7181 is a propagation substrate for vegetable; herb and ornamental young plants from seeds and cuttings in plugs and trays up to 5 cm. Typically used when extra air capacity is needed. Product is suitable for use in Ellepot systems.

COMPOSITION

Peat raw material	Brown Sphagnum peat
Production screening	0–6 mm
Other constituents	Coarse perlite

ADDITIVES

Limestone (Ca,Mg) 3,8 kg
KS1 N-P₂O₅-K₂O 15-12-29 0,6 kg
Wetting agent 0,2 l

pH (1+5 EN 13037): 5,9 (5,4 - 6,9)
Press water: 5,5

EC 1+5 EN 13038: 24 (12 - 36)
Press water: 1,7
